ConTesA Conformance Report

fbi_ebts.xsd
09/25/2020 14:39:18

Summary - Automatic Checks

Rules that can be run automatically by ConTesA are considered "Automatic Checks". There are two types of "Automatic Checks": "Auto Passed" and "Auto Failed". "Auto Passed" rules result in a status of "Success" or "Information". "Auto Failed" rules result in a status of "Warning", "Failure", or "Error".

ConTesA Conformance (v3.0)

Total Number Rules in ConTesA   155

The number of rules that are listed in the ConTesA version 3.0.

Total Number Rules Auto Checked   155 (100%)

The number of rules that are automatically checked by the tool. The remainder of the rules will need to be verified manaully (see the "Manual Checks" section below).

Total Number Rules Auto Passed   155 (100%)

The number of rules that automatically passed validation. A rule is considered to pass validation when it returns a status of "Success" or "Information".

Total Number Rules Auto Failed   0 (0%)

The number of *different* rules that failed validation. Each rule may have failed one or more times. See the sheet "ConTesA - Rules Auto Failed" for specific locations of the failures in your schema file(s). A rule is considered to fail validation when it returns a status of "Warning", "Failure", or "Error".

Summary - Manual Checks

Rules that cannot be run automatically by ConTesA are considered "Manual Checks". These rules must be verified by the user because they are either not yet implemented, cannot be automated, or are only partially implemented in ConTesA. "Partial" rules are in the "manual" category, because the user must verify the portions of the rule ConTesA cannot automate. A rule is considered to be in the "Manual Pass" category if a user has verified that the manual rule will result in a "Success" status. It is considered to be in the "Manual Fail" category if a user has verified that the manual rule will result in a "Warning", "Failure", or "Error" status.

ConTesA Conformance (v3.0)

Number of Rules To Manually Check   0 (0%)

The number of rules that were not automatically checked by the conformance tool. These are the rules that require manual verification (see the "ConTesA - All Rules" sheet for a list of these rules).

Number of Rules Manually Verified   0 (0%)

The number of rules that have been manually verified. Rules can be marked as manually verified by going to the "ConTesA - All Rules" sheet and using the dropdown field in the "Rule Validation" column. This will help keep track of the rules that have been verified manually.
